Modelsim 建立專案教學

建一個資料夾,並將檔案放入此資料夾

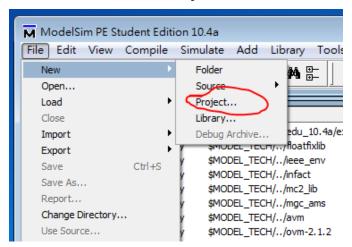

File -> change directory 點選自己要建專案的資料夾

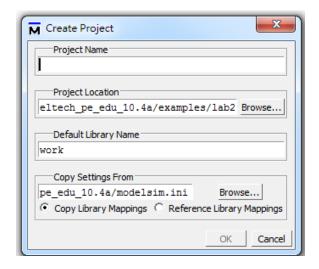

選擇剛剛建立的資料夾

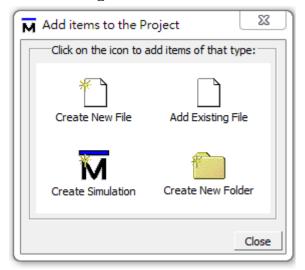

點下 File -> New -> Project

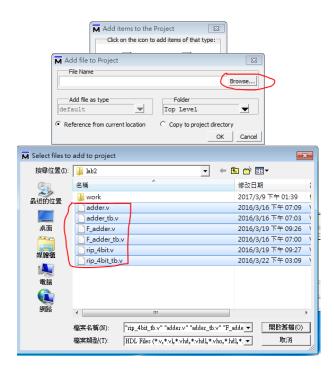

取個名字(e.g. adder, lab2…)

Add existing file

選取檔案:

半加器範例:

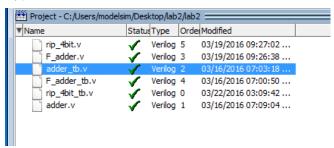

```
module adder(input1,input2,cout,sum);

input input1;
input input2;

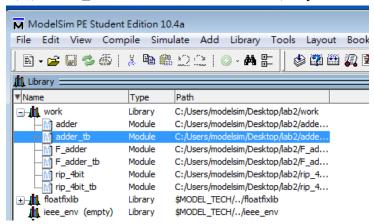

output cout;
output sum;

assign sum = input1 ^ input2;
assign cout = input1 & input2;
endmodule
```

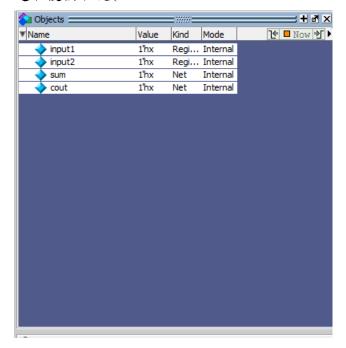

打完後對著檔案名稱點右鍵(compile -> compile selected file 每次修改檔案,都要儲存並做此步驟直到檔案打勾勾),接著在空白處點右鍵新增助教提供的 tb 檔做驗證(add to project -> existing file 一樣要 compile 到打勾勾)

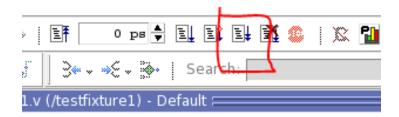

對著 adder_tb 檔點左鍵兩下,跳出視窗按 yes

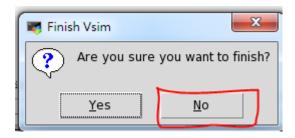

選取後按右鍵(add to -> wave -> selected signals)

接著點下 Run all 即可看波形

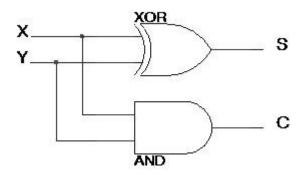

若出現 Are you sure you want to finish? 按NO

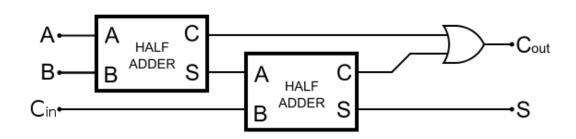

練習:

利用上面給的 half adder module, 先修改 F_adder. v 做出 full adder module, 再修改 rip_4bit. v 做出 4bit ripple carry adder (用附上的 rip_4bit_tb. v 做驗證, 不需要修改 tb 檔)

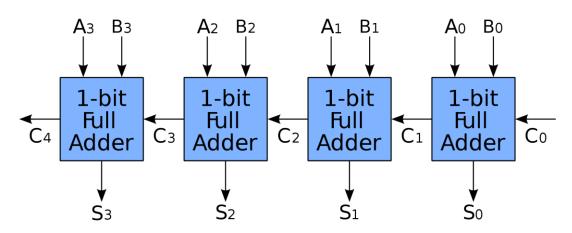

Reference:

full adder module:

4bit ripple carry adder:

運算子參考:

- ~ NOT
- & AND
